Executive Summary

1 High-Level Overview

OVERVIEW	
Project Name	Pred SPC
Project Type	Frontend
Total Test Cases	12
Base URL	https://predictive-spc.streamlit.app/
Pass / Fail / Blocked	Frontend: 12 Passed / 0 Failed

2 Key Findings

Test Summary

The executable frontend subset was very strong: 12/12 tests passed, with no blocked cases, so the score reflects the full exercised UI surface. Core help content, SPC demo setup, and demo data generation flows all behaved as expected, including default setup loading, parameter adjustment, and generating expanded training-scale demo data. This suggests the app is stable for the tested journeys and the user-facing guidance is functioning reliably. While the run is clean, it only covers a focused slice of the product, so broader interaction and edge-case behavior remain unverified.

What could be better

No functional defects were exposed in the tested frontend flows, which is a good sign. The main gap is coverage rather than failures: the suite heavily exercises help sections and demo generation, but it does not prove resilience around error handling, persistence, cancellation, or unusual parameter combinations. Because there were no failures or blocked tests, there is no concrete bug to fix from this run. The next improvement area is expanding test breadth so regressions in less-traveled UI paths are caught earlier.

Recommendations

Keep the current demo setup and help-content paths as a baseline, then add higher-value coverage around invalid inputs, partial configuration states, and failure handling for demo generation. Prioritize tests that verify what happens when parameters are missing, out of range, or when generation is interrupted, since those cases are not exercised here. If you want a quick sanity check, re-run the existing suite after any UI changes to confirm the already-passing help and setup journeys remain stable. No immediate code fix is indicated by this run.

Frontend UI Test Results

1 Test Coverage Summary

This report summarizes the frontend UI testing results for the application. TestSprite's AI agent automatically generated and executed tests based on the UI structure, user interaction flows, and visual components. The tests aimed to validate core functionalities, visual correctness, and responsiveness across different states.

CATEGORY	TEST CASES	PASS/FAIL RATE
SPC Demo Setup	4	4 Pass / 0 Fail
App Guidance & Metric Explanation	5	5 Pass / 0 Fail
Demo Data Generation	3	3 Pass / 0 Fail

Note

The test cases were generated using real-time analysis of the application's UI hierarchy and user flows. Some visual and functional validations were adapted dynamically based on runtime DOM changes.

2 Test Execution Summary

TEST CASE	TEST DESCRIPTION	IMPACT	STATUS
SPC Demo Setup			
Expand the help sections	Verify the informational setup help sections can be opened to review the predictive SPC demo guidance.	Medium	PASSED
Load default SPC demo setup	Verify the demo setup page loads with the default predictive SPC configuration ready to use.	High	PASSED
Adjust demo setup parameters	Verify a user can change the predictive SPC demo configuration before generation starts.	High	PASSED
Start demo data generation with configured settings	Verify the app begins generating demo data and training models after the setup is configured.	High	PASSED
App Guidance & Metric Explanation			
Open the metric definitions section	Verify the user can view the explanations for the predictive metrics used in the app.	High	PASSED
Expand all help sections	Verify the user can open the available help panels to review the app guidance and metric explanations together.	Low	PASSED
Open the feature relationship help section	Verify the user can access the help content describing feature relationships in the demo.	Medium	PASSED
Open the app help section	Verify the user can open the main help content that explains what the demo does.	High	PASSED
Open the prescriptive AI add-ons help section	Verify the user can access the help content describing prescriptive AI add-ons in the demo.	Medium	PASSED
Demo Data Generation			
Generate demo data with default settings	Validate that the app generates demo data and trains models successfully using the default configuration.	High	PASSED
Generate demo data after adjusting the configuration	Validate that changing the demo settings before generation still produces a successful trained demo dataset.	Medium	PASSED
Generate demo data with expanded training scale	Validate that the app can generate and train on a larger demo configuration without leaving the generation flow.	Medium	PASSED
